Salt tolerance

A new sport and traffic favorite

Vigor and vitality are improved in this variety.

Disease resistance and tolerance to red thread is better than average for the species.

Dakisha has the leaf size slightly above average to other top Kentucky bluegrass, resulting in a significant better wear tolerance.

Rhizomes characteristic for the species will cover any damages nearby. It is an excellent source for structure and stability in the sward.

Winter green and spring green

This variety is well adapted for many purposes and has proven very green during winter and spring.

DAKISHA is the efficient solution for sport and traffic wherever visual impression is important.

Practical

Sow in a well-drained bed. For optimal long-term performance in clay loam soils in cool temperate areas, use DAKISHA in a mix with Perennial rye grass.

In warm dry climate consider a tall fescue mixing partner.
