

HUMBOLDT

Festuca commutata

Chewings fescue

Another step towards ideal turf

- Uniformity at top level
- Density and fineness at an extreme level
- Suitable & sustainable for lawns and even golf greens
- Very high winter hardiness

Ratings

Density

Colour

Red thread tolerance

Salt tolerance

Close mowing tolerance

STRI Bingley top rank

In all trial types HUMBOLDT reaches the top level.

Green trials

Outstanding scores for shoot density, visual merit and resistance to red thread. Can advantageously be added to mixtures with Browntop bent and Slender creeping red fescue on top playing golf greens. For further sustainability in pure fine fescue greens: Chewings + Slender creeping red fescue.

Lawn trials

Mown at lawn height (in UK conditions this is still very close mowing!), HUMBOLDT is incredibly dense and fine. Go for it for the most demanding prestige lawns!

Cold tolerance

Chewings fescue has one of the very best winter hardiness levels.

Performance in very close mown trials (lawn)

STRI Bingley 2014 - Table L3 Lawn

	Shoot density	Visual merit	Mean	Resistance to Red thread
Average 39 varieties	6,8	6,8	6,8	6,2
Humboldt	7,8	7,5	7,7	6,8

Scale 1-9, 9 = best, more dense etc.

Performance in trials mown at green height

STRI Bingley 2014 - Table G2 Green

	Shoot density	Visual merit	Mean	Resistance to Red thread
Average 43 varieties	6,8	6,8	6,8	6,3
Humboldt	7,8	7,4	7,6	7

Scale 1-9, 9 = best, more dense etc.
