

HEIDRUN

Festuca rubra rubra

Strong creeping red fescue

Fast establishing with excellent density

- Very fast establishment!
- Improved traffic tolerance
- Very high shoot density
- Above average salt tolerance

Ratings

Red thread tolerance

Salt tolerance

Easy establishment

Red Fescue in mixtures is often suffering from a slower establishment rate than perennial ryegrass. HEIDRUN performs better and will also perform better in repair/overseeding mixtures.

Improved wear tolerance

Strong creeping red fescue has average wear tolerance, but through breeding improved performance is observed with HEIDRUN. Appreciated on playgrounds!

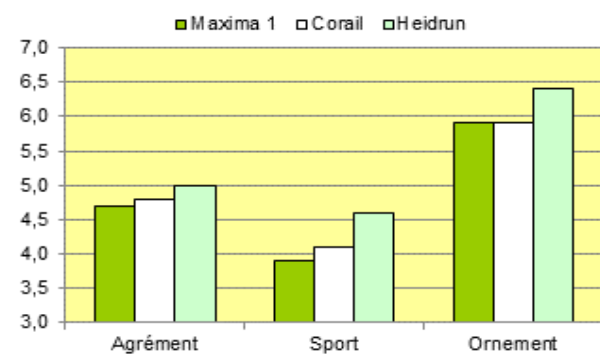

Very high shoot density

Red fescue is fine and dense - nevertheless we added a little more density. Few chances for any weed to find room...

Higher salt tolerance

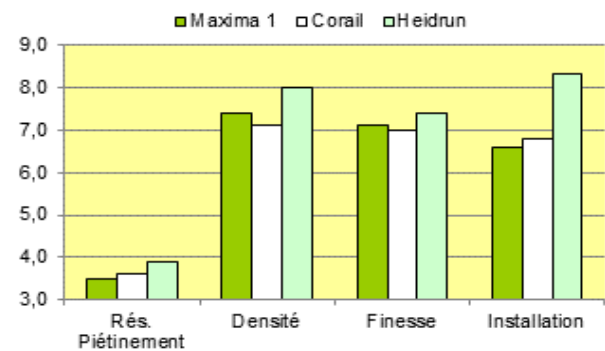

In our salt tolerance trials HEIDRUN has shown performance above the average for the species.
